

UKTC Ensure certification – Trovex Hygidoor

Hygidoor: independently certified under UKTC Ensure

Trovex Hygidoor fire doorsets are third party certified under UKTC Ensure, a UKAS accredited performance doorset certification scheme operated by United Kingdom Testing and Certification (UKTC). Trovex is listed on the UKTC Ensure register as certified company UKTC 1010.

Certification gives specifiers, contractors and building owners independent confirmation that Hygidoor doorsets are manufactured consistently to the specification that was tested, and a direct route to the evidence behind each door.

Why UKAS accredited third party certification matters

A fire test report shows that one sample door performed on the day it was tested. It does not show that every door leaving the factory is made the same way. Third party certification closes that gap.

Under a certification scheme, an independent body:

- assesses the manufacturer's factory production control before certification is granted
- samples products for initial type testing
- carries out surveillance audits at least annually to confirm standards are maintained
- controls the labelling that identifies each certified product

UKAS accreditation matters because it means the certification body itself has been independently assessed. UKAS is the UK's national accreditation body. A certification body accredited to ISO/IEC 17065 has been checked for competence, impartiality and consistent operation of its schemes.

For the people responsible for a building, this provides evidence that the fire doors specified are the fire doors supplied. It also supports the duty holders' need to keep accurate, accessible information about the safety of their building.

What makes UKTC Ensure different

UKTC Ensure covers the same core requirements as other certification schemes: factory audits, product testing and annual surveillance. Its difference is in how the evidence is held and accessed.

With many established schemes, a label on the door carries a reference number. Checking what that number covers usually means contacting the scheme or the manufacturer and working

through separate paper or PDF records. UKTC Ensure was designed to make that evidence available at the door itself.

Feature	What it means in practice
Tamper-resistant QR label on each doorset	Anyone on site can scan the label to see the door's certified performance
Digital evidence vault	Certificates and technical data are held in one version-controlled location, so the information viewed is the current issue
Linked to product marking	The label connects directly to the evidence for that product, not a general company record
Designed around the golden thread	UKTC is the first UKAS accredited third party certification scheme designed around the golden thread principles, and aligned with BS 8644-1:2022 on the digital management of fire safety information

For Hygidoor, scanning the QR code on the door frame also gives installers access to the current installation instructions and fire documentation. This helps installers fit the doorset as it was certified, and gives building owners a record they can return to throughout the life of the building.

What this means for Hygidoor projects

- **Specifiers** can name a doorset with independently verified fire performance and check its certification before and after installation.
- **Contractors and installers** can scan the frame label on site for current installation instructions and fire documentation.
- **Building owners and facilities teams** have a permanent, digital link to each door's evidence for inspections, maintenance and fire risk assessments.

The scope of certification, including the Hygidoor configurations and fire ratings covered, is set out on the Trovex UKTC Ensure certificate. Configurations: Single, Leaf & Half, Double. Single & Double Action. FD30 & FD60.

Certificate and verification

You can check Trovex's certification status at any time on the UKTC Ensure register: [Trovex – UKTC Ensure certified company UKTC 1010](#).

[Download the Trovex UKTC Ensure certificate \(PDF\)](#). Certificate number: 20260001. Valid until: 21 April 2031.

UKTC's accreditation can be checked on the UKAS website: [UKAS schedule of accreditation 21542](#).
